

# TECHNICITY: Final Product

How to solve traffic congestion when school bells ring in Vallo della Lucania (ITALY)

**Project plan:** the map of wireless sensor system along the street and the position of the signal: the wi-fi antenna already exist in the city.

The Ringing Bell App: a imple mock up just to show how I image that the data would be communicated.

**LED signal:** SketchUp model and rendering of the LED signal in the urban context.
